# Winery General Order Applicability Flow Chart

*Prepared by Condor Earth and Stoel Rives LLP*

## **\*Additional Information\***

- In accordance with California Business and Professions Code sections 6735, 7835, and 7835.1, all plans and reports that contain work plans for investigations and studies, that describe the conduct of investigations and studies, or that contain technical conclusions and recommendations concerning engineering or geologic evaluations or interpretations shall be prepared by or under the direction of appropriately qualified professionals (e.g., California Registered Civil Engineer, Professional Geologist, or other registered certified specialty geologist).
- Pursuant to the Winery General Order (Finding No. 61), a Notice of Applicability (NOA) will be issued by the State Water Board. The NOA will, at minimum, confirm the facility's Tier, provide a Monitoring and Reporting Program (MRP) and, if applicable, a timeline for compliance. Compliance and monitoring requirements are dependent on Tier designation.
- It is the intent of the State Water Board that all eligible wineries be covered under the Winery General Order. Thus, discharges currently covered by individual Waste Discharge Requirements (WDRs), general WDRs, or a conditional waiver of WDRs may continue discharging under that authority until those orders expire or come up for renewal. *\*There may be other circumstances that trigger coverage under the order prior to expiration or renewal. Contact Stoel Rives LLP and/or Condor Earth for further assistance.*
- The Winery General Order is not a National Pollutant Discharge Elimination System (NPDES) permit issued pursuant to the Federal Clean Water Act. Winery operations with the potential to discharge winery waste to a water of the United States may require coverage under an NPDES permit. Wineries with the potential to discharge stormwater to a surface water of the United States are also required to have coverage under the statewide General Permit for Storm Water Discharges Associated with Industrial Activities, Order No. 2014-0057-DWQ, NPDES No. CAS000001 (Industrial General Permit), the statewide General Permit for Storm Water Discharges Associated with Construction Activities, NPDES No. CAS000002 (Construction General Permit), and any future promulgations, if the terms of these permits apply to the facility.
